

A Fully Digital Ramp Operation

Create an integrated baggage reconciliation system with real-time operational data, improve communications, and reduce mishandled bags.

Create a digital ramp operation

"Where's my bag?!?" Unfortunately, a sometimes all-too-frequent question. TA Ramp delivers fast, digital baggage scanning that significantly improves reconciliation accuracy and reduces mishandled bags, while also providing the necessary realtime operational information critical to every turnaround, wherever your ramp agent is located.

The ramp is no longer the communication blind spot for any airlines. TA Ramp provides real time communication with your agents and delivers 100% digital baggage scanning that meets the IATA 753 compliance standards.

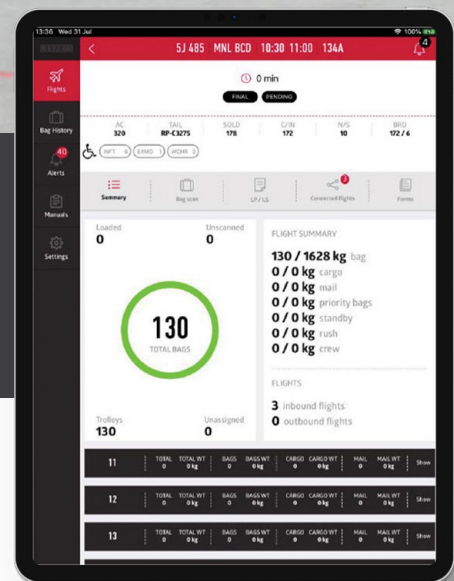

Locate any bag any where any time

Integrated with multiple core airline systems including DCS, Flight Operations and Weight and Balance systems for streamlined and paperless ramp operation TA Ramp. Keep compliant with IATA 753 regulations. Using high volume cameras or scanning devices, you can track bags and know their location at any step of the loading process.

TA Ramp also gives visibility into the entire turnaround process, including check-in and boarding status, standby passenger clearance, and operational changes such as aircraft or gate changes. The app also delivers fast offload baggage processing when passengers with checked bags fail to board the flight.

Transform your ramp operation

Airlines can also access TA Turn, our integrated turnaround management solution from TA Ramp for even more operational improvements. Let TA Ramp transform your ramp operation today!

Benefits

IMPROVED COMMUNICATION

With access to real-time check-in and operational information, TA Ramp allows your agents to react quickly to any baggage issue. TA Ramp also reduces reliance on two-way radio chatter as your agents have the necessary information at their fingertips.

INCREASED EFFICIENCY

Access to real-time data and faster communication within the ramp operations team and with other airline groups. Enables ramp staff to get their work done more efficiently.

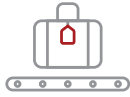

IATA 753 COMPLIANT

Digital baggage scanning that meets IATA 753 standards and creates a true digital ramp operation.

STREAMLINED PROCESSES

Remove manual processes that slow down ramp operations with a digital approach, saving time and money.

Our Complete, End-to-End Airline Solutions

TA RAMP

Digitize your ramp operation to improve every flight departure. TA Ramp is a digital and mobile platform that tracks bags, integrates with load planning and weight and balance systems, and provides alerts and baggage status.

TA CREW

Automation of the crew layover process and a digital cabin with integrated point of sale

TA TURN

Real-time visibility, alerts, and flexible access to all turn tasks

TA DISRUPTION HUB

Proactive, digital disruption management with a focus on passenger self service

TA AIRPORT

Mobile DCS to transform your airport operation and improve the passenger experience

TA INFLIGHT

Enhanced flight service with a digital cabin and integrated POS to grow inflight retail revenue
